Ensuring that our partners data is secure and that their remote team operate ethically, and within local privacy regulations is one of our most common internal discussion points. We are constantly evaluating our processes to ensure that we are adhering to the constantly varying rules and regulations in the many countries in which we operate.

There are a range of processes we adopt to achieve data protection and privacy for our partners:

- All team members must sign an NDA before being deployed into our partners teams. The NDAs do vary depending on the country in which our partner operates.
- All team members have their activity tracked in a live environment whilst operational with many security measures in place. This acts as our centralized monitoring system.
- We do not allow shared access to job boards, applicant tracking systems or premium licenses on networks such as LinkedIn.
- All team members operate within secure file-sharing and messaging platforms which have controlled and managed access rights.
- We do not allow removable USB storage devices into our operational offices.
- Leadership teams are highly responsive to the latest security and data protection trends, threats and host routine training for team leaders on updated security protocols.
- Where possible, we deploy anti-phishing software to validate domains and immediately blocked phishing attacks.
- If hosting client data, we deploy high end network firewalls.
- For our partners that operate in GDPR zones, we provide additional privacy policies such as utilizing two factor login protocols which are centrally managed to only working with data that unambiguous consent.

WE HELP HIRE, BUILD, & MANAGE YOUR REMOTE TEAM FOR YOU.

When you build your remote teams with us, you are not only securing a fantastic remote work force, that is exceptionally cost effective, but you are also acquiring a highly skilled Human Resource & Operations team as well as world class Operational Infrastructure.

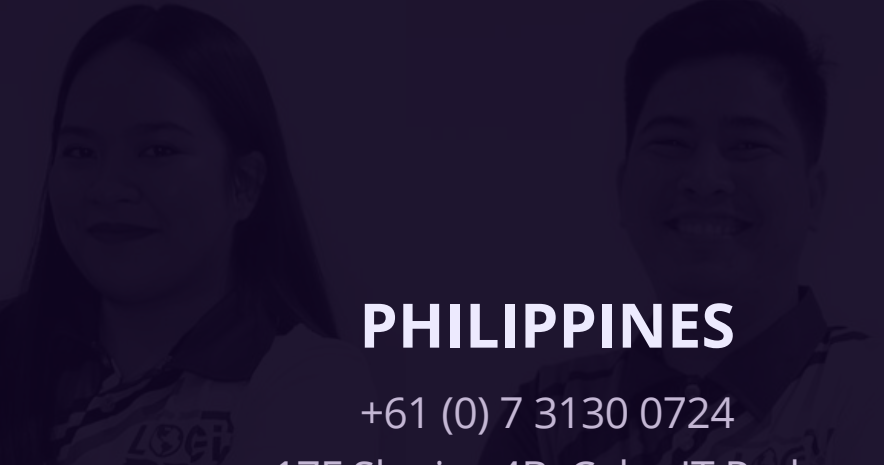

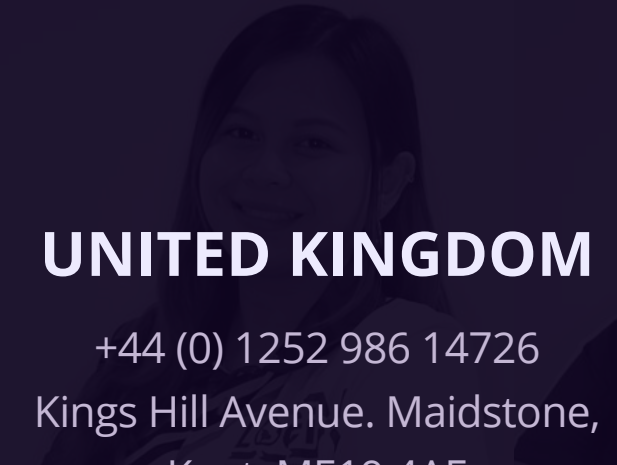

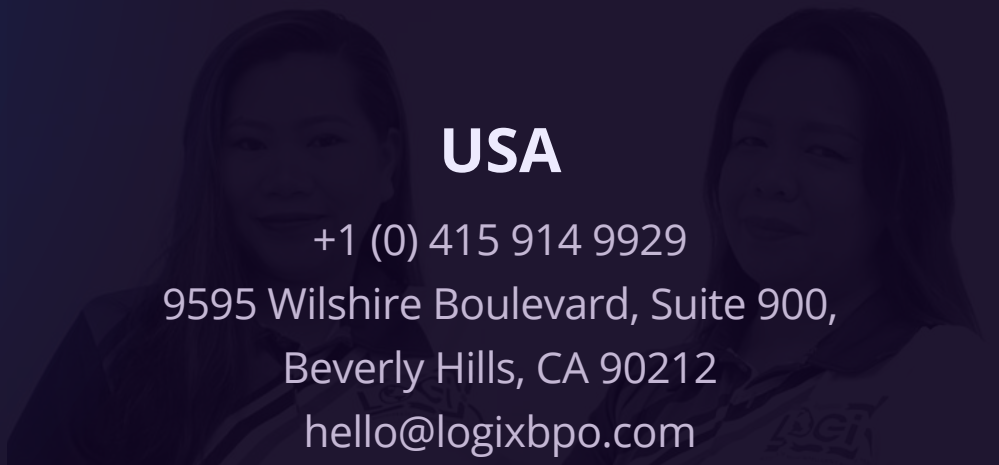

We provide a Fully Managed Remote Staffing Service.

A common question that we receive from new partners building their remote teams with us is, "What makes your solution so cost effective". It is quite easy to answer that:

Think of it this way. If you were to hire a Human Resource Manager, Operations Manager, Team Leader plus invest in all the Operational Software, IT, Hardware and Office; how much would that cost you per month in your local area?

In most cases, this will be in the region of tens of thousands of dollars per month.

We provide this to you just a few dollars per hour, and it is that, as well as exceptionally talented remote team members that make our remote staffing solution so cost effective.
